## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 1-38, 40-54, 86-94 and 100-105 are allowed over the Prior Art of record.
2. The following is an examiner's statement of reasons for allowance: As to independent claims 1, 13, 43, 86 and 100, the primary reasons for allowance is the inclusion of the limitation of applying approximately an *atmospheric pressure* (emphasis added) to a structure in which strain is induced in response to a pressure differential in a subterranean well sensor system. The Prior Art is completely devoid of any teachings wherein atmospheric pressure is employed as one of the pressures (typically external to the structure) in the differential pressure measurement application. As to independent claims 38 and 41, the primary reasons for allowance is the inclusion of the limitation of a *hollow cylindrical* (emphasis added) structure including first and second strain sensors employed to measure a pressure differential in a subterranean well sensor system. The closest reasonable Prior Art reference is US 5,024,098 to Petitjean et al. (see Fig. 1 below) which discloses a structure formed of two half-shells and strain gauges to measure the pressure differential in the subterranean well.
